AI Engineer

Problem Solver and Innovative Builder

Performance-driven AI and Backend Systems Engineer specializing in high-throughput event-driven microservices, real-time streaming architectures and production-grade LLM observability. Experienced in designing multi-agent orchestrations, real-time message brokering, and building robust, scalable APIs.

Skills

- AI & LLMops: Multi-Agent Systems, LLM Observability, RAG, NLP, LangGraph.
- Backend Engineering: FastAPI, Node.js, Python, Asterisk VoIP, RESTful & GraphQL APIs, Serverless
- Databases & Caching: PostgreSQL, Redis, MongoDB, Vector DBs.
- Messaging & Event Streams: NATS, Apache Kafka, RabbitMQ, Server-Sent Events (SSE).
- Infrastructure & Tools: Docker, git, NATS, Kafka, Temporal, S3
- Team Player and effective communicator

Experience

Backend Developer

2025

Emerj Incubator

- Built a microservice-based distributed notification system with async processing and queues, boosting delivery reliability and stable message output.
- Integrated a market-intelligence AI agent with Telex.im using Google A2A Protocol and agent orchestration logic to improve Crypto and Forex Technical analysis accuracy by 30%.
- Implemented OAuth2 with JWT secure authentication, custom AI safety guardrails, and transactional journal-entry logic, cutting authentication issues and securing data access via role-based access control.

Education

B.Sc. Software Development

2026

Brigham Young University, Idaho

- Gaining expertise in full-stack development and software engineering principles

Pathway Connect Certificate

2023

BYU Pathway Worldwide

- Teamwork and collaboration
- Goals and time management

B.Sc. (Hons) Environmental Management & Toxicology

2021

University of Benin, Benin City

- Specialized in environmental monitoring, pollution control, and toxicology testing.
